

Resolution Reconfirming NGWA's Position on Private Wells

Subjects

Water well use, groundwater use, groundwater

Audience

Homeowners, government officials, building contractors

Resolution

The Board of Directors of the National Ground Water Association supports the following statements consistent with the long-held positions of the Association:

American citizens should have:

- The right to use the best source of potable water available
- The right to install a properly constructed water well on private property
- The right to use a properly tested and constructed private water well as a source of potable water.

Furthermore, the National Ground Water Association supports laws and regulations that:

- Govern the proper construction of private water wells
- Require the licensing and/or certification of water well drillers
- Require the continuing education of water well drillers
- Require the systematic inspection of new well construction
- Require the strong, consistent enforcement of the above laws and regulations.

And furthermore, the National Ground Water Association believes that laws and regulations which require mandatory hook-up to public water systems should be eliminated on the basis that they violate the private property rights assured by the U.S. Constitution.

Dates

Adopted by the NGWA Board of Directors, December 6, 1999, Nashville, Tennessee; contacts updated April 19, 2012; technical update June 19, 2013; technical update July 21, 2014; technical update March 26, 2015; technical update February 24, 2016.

The National Ground Water Association is a not-for-profit professional society and trade association for the global groundwater industry. Our members around the world include leading public and private sector groundwater scientists, engineers, water well system professionals, manufacturers, and suppliers of groundwater-related products and services. The Association's vision is to be the leading groundwater association advocating for responsible development, management, and use of water.
